Allowable Subject Matter

1. Claims 1 through 10 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose performing a tank leak diagnosis by a negative pressure after turning off of the internal combustion engine; and producing the negative pressure in the fuel tank immediately before the turning off of the engine. The closest prior art of record is Hirano et al, 6666072. Hirano et al. maintain negative pressure in the tank throughout engine operation irrespective of whether the engine is about to shut off. Once the engine does shut off, Hirano et al. performs the leak diagnosis. The other ways leak detection are performed in the prior art include using the cooling of the fuel in the tank after the engine shuts down to create the negative pressure, using a separate electric pump after the engine shuts down to change pressure(positive or negative) in the tank, and using negative pressure while the engine is running.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
